

NEW PRODUCTS

The following products are specially designed to make your Parkade System **quieter, safer and last longer**:

Quiet Package

A combination of urethane rollers and vibrasonic mounting brackets are used to absorb sound and vibration and provide a quieter operating system.

Photocell Safety Devices

Infrared photo electric safety beams designed to prevent door from closing when a vehicle is blocking or passing through the opening.

Electric Miller Edges

A custom manufactured edge placed on the bottom of the door that, on contact with an object, sends a signal to the operator to reverse the direction of the door.

Security Mesh

Aluminum mesh welded onto the standard picket style parkade door. This increases security by preventing pickets from being cut out to gain access into parkade.

Long-Lasting Torsion Springs

High cycle torsion springs designed for long operating life.

Security Controls

Special access controls designed to reduce or eliminate problems associated with stolen or lost remote controls.
